

## 4.6 SOFA, SO GOOD

**Objective:** Multiplication Tables.

**Instructions**

1. How many people can sit comfortably on your sofa? Stand up and sit down that many times
2. What if you had seven sofas of the same size? How many people would fit on the seven sofas altogether? Stand up and down that many times as well
3. Imagine you had 9 sofas all the same as your real one. How many people would fit on all nine altogether? What if you had 11 sofas just like your real one. How many people could sit on those 11 sofas? What about 12 sofas, all the same size.

**Challenge**

Count the houses in your street or road. How many people would be able to sit on all the sofas combined if they were all the same as your real sofa? What if every house had 3 sofas? Or 7 sofas in each house, all seating the same number of people as your sofa at home?
